

Beijing State Sport, China

The structure specialists of Häring succeeded in delivering the demanding roof construction out of wood to Beijing.

A Chinese-Swiss team successfully mounted the roof which was fabricated in Pratteln and Burgdorf in December 2003.

The awarding authorities were impressed by the professionalism with which the Häring Corporation carried out the project in spite of the time pressure.

Education Resource Centre, England

Here in a gigantic construction called "Eden Project", scientists display the most important interactions between nature and the environment.

Roof Construction by Häring

Structural roof system with double curved glulam beams. Over 400 preengineered insulated roof elements and window modules cover the very demanding roof geometry.

The layout of the intertwined spiral shape of arches is based on the mathematic relation of the Fibonacci sequence. The harmony of this natural law also applies to this man-made construction.

Architect Nicholas Grimshaw said:

"I can tell you this: If every building is built like this, the world is a much better place."

Client: Eden Project, Cornwall

Architect: Grimshaw, London

Engineer: Anthony Hunt Associates Ltd., Gloucestershire

Execution: 2004 - 2005

12'000m2 Glulam roof for sciences & research (Paul Scherrer Institute PSI Villigen AG Switzerland)

The Institute PSI complies a circle-shaped laboratory for the Swiss Lightsource-Synchrotron, that comes into operation in the year 2001.

Radically arranged double hinged arches with tension rods underneath span over a length of 42m.
